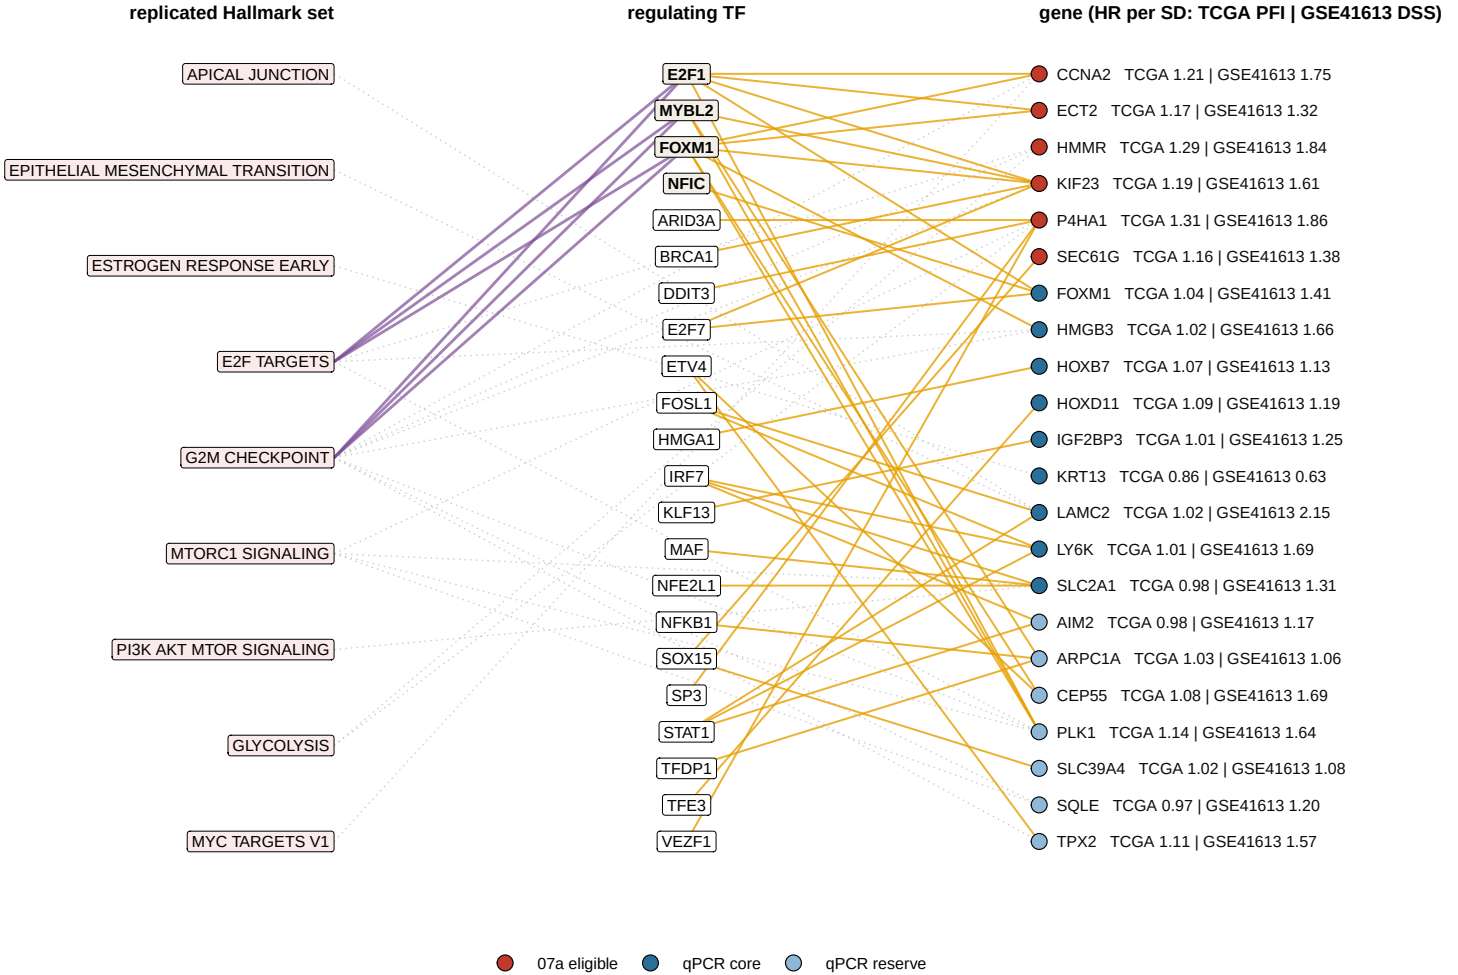
## Story: pathways –> TFs –> panel and eligible genes (HPV−)


dotted: gene in the shared leading edge (C2 and TCGA) of a replicated Hallmark set; purple: core−TF targets enriched in the set (hypergeometric FDR < 0.05); orange: TF –> gene edge (core TFs from either source; other TFs = pySCENIC consensus regulons). Regulons are inferred, not experimentally proven. Genes without a replicated pathway or regulator are not shown.
