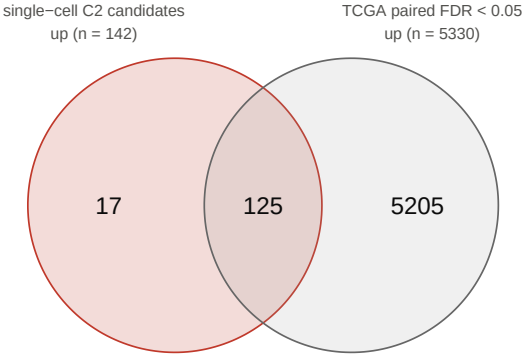
HPV− tumour vs normal: single−cell candidates and TCGA paired DE

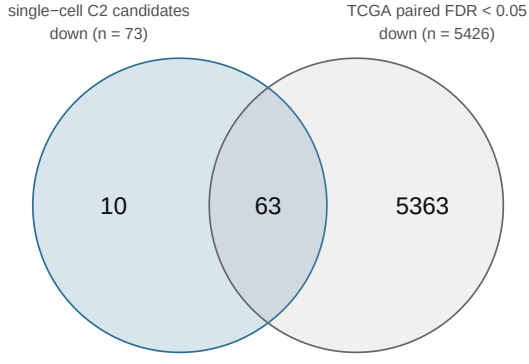
candidates = step 04b C2 significant with C1 in the same direction; TCGA = 40 HPV− pairs, FDR < 0.05, same direction (no fold−change cut−off)

HPV− up in tumour



0 of 142 candidates not tested in TCGA; 88% of candidates in TCGA set

HPV− down in tumour



0 of 73 candidates not tested in TCGA; 86% of candidates in TCGA set
